 **GLOBAL.AG S&C**

I. INTRODUCTION

HISTORY:

Resulted from the **FUSION OF TWO POWERFUL PRIVATE SECURITY GROUPS**, namely The Elite.Ltd and CATURIX Security & Communication in 2011, GLOBAL.AG Security & Communication was born.

Following the trend of many western companies in the early 2010s, reshaping the venture's internal architecture resulted in a much straighter and **SHORTER HIERARCHY** seriously boosting productivity and decision making. Keeping this new gained **FLEXIBILITY** and adaptability to new tasks quickly is key to our **SUCCESS STORY**.

Being approved by powerful international institutions such as EAGLE Association (European & American Guards & Law Enforcement Association) reflects the quality standard we aim to achieve with every task we take on.

WHAT IS GLOBAL.AG SECURITY & COMMUNICATION?

Base of the Goliath-1 unit with GLOBAL.AG C.A.T. armored vehicle, Dnipro airport (Ukraine) 2015.

Our company is not only a sector-oriented security service provider but an international provider of **COMPLETE SOLUTIONS** and **TECHNOLOGIES** covering all aspects of civilian & government defense and **HUMANITARIAN AID**.

To support local security forces, **HIGHLY FLEXIBLE TEAMS** of experienced specialists in administrative and operational duty can be mobilized spontaneously and supplied with specific equipment from our **OWN IN HOUSE PRODUCTION** (vehicles, electronics, mobile fortified bases & more). Due to self-supply, long waiting- and preparation periods are eliminated as well as the dependency on possibly necessary but hardly available special equipment.

For the **EXACT ASSESSMENT OF GIVEN SITUATIONS**, our intelligence analysts gain relevant information in advance and evaluate it responsibly.

If needed, our crisis managers advise and provide strategies and solutions, make contact with other conflict parties, if possible, and seek to **REACH AGREEMENTS, CEASE-FIRES AND NONVIOLENT DISPUTES**.

Development teams aid to build and/or modernize public infrastructure and political systems to help **GAIN RECOGNITION AND/OR END EMBARGOS** in foreseeable future.

GLOBAL.AG sees its task in securing, stabilizing and calming conflict situations and to guarantee a safe tomorrow for vulnerable regions.

"Because the highest level of combat is not to combat."
(Batuo, 495 AD)

[illegible]

II. SECURITY SERVICES

SECURITY SERVICES SHORT OVERVIEW:

- Personal protection / H.V.I. Close Protection
- Facility protection
- Convoy protection
- Security in information & communication technologies
- Mediation between conflict parties (at state and non-state level)
- Consulting / Strategy and Risk Management / Exit Strategies / Scenarios
- Training of national security forces
- Mediation of co-operation and mergers with mutual benefit
- Unmanned aerial reconnaissance and installation of radio-free zones
- Unmanned ground reconnaissance
- Installation of fortified sites and fortification of buildings and property/RE

In addition we provide tactical education to private security companies and private individuals.

$$\frac{\text{DefCon}}{x} = \text{ConOps}$$

Defensive Condition / Budget = Concept of Operations

CLOSE PROTECTION DEPARTMENT:

Since reforming the company back in 2011, to what it is today, the GLOBAL.AG Close Protection Units were invested some of the **MOST EFFORT & ATTENTION TO DETAIL** in. Becoming without doubt the most elite operative department inside our company architecture, those extremely capable units of highly trained and well equipped professionals combine all **THE BEST STRATEGIES, EQUIPMENT & EXPERIENCE** from all fields of security, combat and anti terror. Because in contrast to assets and infrastructure, **THE HUMAN LIFE CAN NOT BE COVERED BY ANY INSURANCE** on earth, we are proud to offer to our customers what is essentially **THE SPEAR TIP** of our operator pool for their personal protection needs.

Our CPUs are perpared for both:
EXECUTIVE PROTECTION missions inside peaceful urban areas as well as **HIGH RISK CLOSE PROTECTION** operations across unstable regions and within hostile environments.

Close protection training videos:

III. EXECUTIVE PROTECTION

As **SECURE** as steel plating,
as **COMFORTABLE** as a tailor made suit –

this is probably the best way to describe our services in this segment. In executive protection we learned over the years: To the VIP comfort is just as important as actual security. Out of two personal protection operatives VIPs are often more likely to choose the one with the better manners and cleaner appearance rather than the one with better qualification. They would often chose a stock car over an **ARMORED VEHICLE** if the ride quality and comfort are worse after armoring or the exact model desired is not available. We adopted to this issue over time offering to our executive protection customers **THE BEST FROM BOTH WORLDS**: Rock solid security solutions delivered in an exquisitely comfortable package. We have build a reliable network with the **WORLDS LEADING SUPPLIERS** of low profile armor such as Miguel Caballero (www.miguelcaballero.com) manufacturing the worlds most exclusive handmade **ARMORED DESIGNER TAILOR**, DANAPER LLC USA (www.danaper.com) for **CONCEALED CARY GEAR** and International Armored Group (www.interarmored.com) building the worlds best **BALLISTIC & BLAST RESISTANT LUXURY VEHICLES** - to name just a few.

Working in different countries around the world, our Close Protection Units are often set up from EU and US residents of local ethnic.

Understanding the local mentality and **SPEAKING LOCAL LANGUAGES** on a mothertongue grade yet at the same time having been trained and examined on an elite special operation forces level to the **HIGHEST STANDARDS OF NATO**, those units, again combine the best of both.

IV. DIPLOMATIC SECURITY

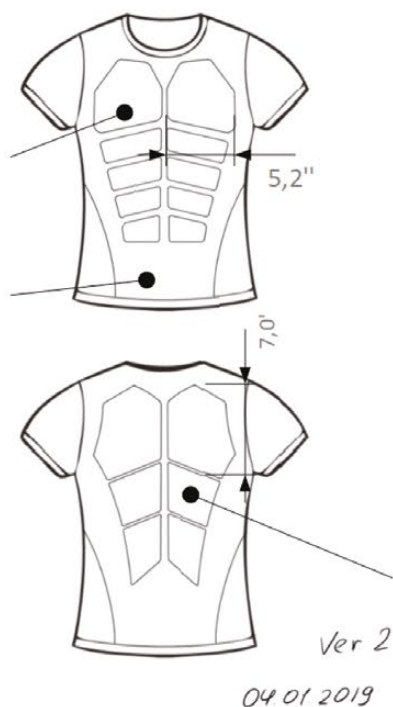

Working at high risk threat levels in stabile urban environments is a very tricky task, especially when still having to apply **LOW PROFILE** gear and tactics which is true in almost 90% of all DS missions.

Having to be just as little noticeable to the naked eye as the mostly lower DefCon executive protection for corporate clients, Diplomatic Security is tailored for government outsourcing and has to be able to **COUNTER MORE DIFFICULT ISSUES** such as espionage, terror, ambush and riot. To provide the quality of service demanded by government clients, as well as to **STAY ON EYE LEVEL** with hostile **SECRET SERVICES** and intelligence agencies on one hand and political extremism and terror groups on the other, our units frequently go trough **CONTINUOUS TRAINING**.

While our most decorated, combat proven security operators on the ground are the backbone of every diplomatic security task, a company-intern administration department prepares and backs up every step by **RESEARCH, MONITORING, OBSERVING**, gathering intelligence and cooperating with friendly government agencies if needed.

The engineering department is able to **QUICKLY RESPOND TO EVER MODERN OR SPECIFIC THREATS** by developing specialized and unique electronics, gear, weaponry and tools based on latest trends, operational experience, gathered intelligence or simply requests placed by our units. Being developed and build in small series exclusively by us for us, certain mission equipment is completely unknown for outsiders, thus adding the benefit of uncertainty among potential attackers, higher risk of uncover and surprise element if contact occurs.

Those three pillars (**ADMINISTRATION - ENGINEERING - OPERATION**) are the fundament of our success in the field of Diplomatic Security and one of the main reasons we can proudly announce to **NOT HAVE LOST** a single high value individual nor operator **WITHIN ALMOST A DECADE OF EXISTENCE**.

Design blueprints of the GLOBALAG NXT LVL body armor system.

V. HIGH RISK CLOSE PROTECTION

Unlike Executive Protection, specialized for the needs of private persons and corporate clients, or Diplomatic Security, custom tailored for the needs of public officials, High Risk Close Protection, or simply just Close Protection fits the demands of both: **PRIVATE SECTOR AND GOVERNMENT** when having to work in- or travel through uncontrolled hostile territory. The ability to reliably address even military-like threats or local OpFors subordinates a low profile appearance and constant contact with friendly armed forces in the area of operation is key. In order to provide sufficient ConOps in this specific field of security the use of military equipment like **LAPVs, MRAPs** or **UAVs** is indispensable. This is why in High Risk Close Protection the lines between personal security and Private Military Contracting fade.

Please place a personal request for more information on this specific topic.

High Risk promo video:

Who fails to prepare,
prepares to fail...

VI. PRIVATE MILITARY CONTRACTING

One of the most diverse fields of security is undoubtedly Private Military Contracting. Starting with basic support and logistics for deployed official armed forces over estate guarding, border patrol, convoy protection and more, the PMC department is specialized in protecting assets and territory. Trained and equipped no worse than a NATO military special operation force, this department is prepared to back up any transport, infrastructure or other assets from hostile action.

While looking back at successfully accomplished and ongoing long term missions in Latin America, the Middle East and East Ukraine – to name a few – we always prepare for future tasks and constantly evolve tactics, strategies and tech.

Please place a personal request for more information on this specific topic.

PMC training video:

„Prevention is always cheaper
than damage control”

**INTERNAL NOTES:
SECURITY SERVICES**

Lined writing area consisting of 20 horizontal lines.

VII. DEVELOPMENT

Just like biological evolution, there is political and technological evolution. Unlike biological evolution, which changes life through cycles of dozens of generations, **TECHNOLOGICAL & POLITICAL EVOLUTION** has the power to **CHANGE LIFE DRASTICALLY & QUICKLY**. All three are true forms of evolution since certain events and developments lead to similar or same results no matter the age or location they occurred. Almost all human societies developed similar hierarchies, forms of housing and transportation, script and language independently all through history and around the world. The development of technology such as simple open bolt submachineguns and later the further development of telescopic bolts for the same type of weapon are good examples of technological evolution. This technology was **DEVELOPED** secretly and **INDEPENDENTLY BY** almost **EVERY MAJOR NATION** around the time of World War 1 and later refined exactly the same way, yet again, by several independent developers around the same time after World War 2. The Mayas and the ancient Egyptians developed very similar hieroglyphs, build very similar pyramids and developed very similar religions, again, around the same age and independently from each other.

Given a certain period of economic stability and prosperity almost every civilization will develop essentially similar hierarchies and technologies, even if completely uncontacted. **DEVELOPMENT IS AN UNSTOPPABLE STREAM** in only one direction. Being unstoppable in its very nature, however, development can be slowed down or limited by unreflective legislation or conflict which of course negatively affects a society's economic capability. Sometimes restrictive traditions, dogma, ethnic conflicts or other factors form enclosed circles that make it hard for a society to break through and keep developing while easy to lose their position among the world's nations. Sometimes it just needs an independent, **FRESH VIEW** on old things and friendly **GUIDANCE TO RESHAPE, REBUILD & REFINE**.

That's where the GLOBAL.AG **DEVELOPMENT & AID DEPARTMENT** comes into play. Being a private enterprise we see things commercially and learned over time »

- » how to get **THE BEST POSSIBLE RESULTS FOR THE LOWEST POSSIBLE EFFORT**. Our teams think creative and out of the box, finding new ways and applying old, proven concepts where needed. Most of the times the goal of this department is to **END HUMANITARIAN CRISES**, build sufficient infrastructure to **RAISE LOCAL LIVING STANDARDS** to an acceptable level and modernize the local economy and legislation to prevent a fall back to the situation surpassed.

We set a strong accent to **KEEP LOCAL ASSETS LOCAL** and the control over domestic institutions domestic. We always try to collect necessary investments via **DONATION CAM-PAGINS** and high class **BENEFICIARY** events to keep the people aided **FREE FROM ADDITIONAL DEBT**. Partially being an NGO the department Development & Aid is strongly interested in passing on important know how to local representatives and entrepreneurs by multiplication principle (teach the teacher) so further growth and development **CAN BE MAINTAINED WITHOUT FOREGIN HELP** for the foreseeable future.

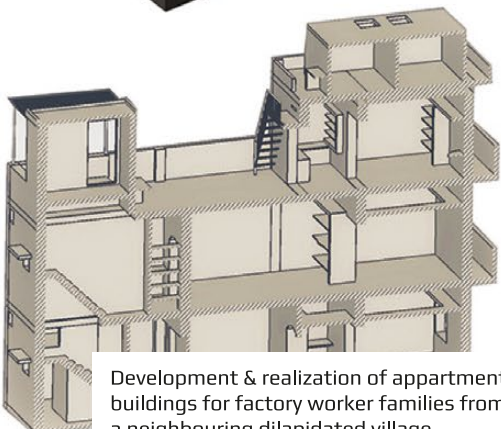

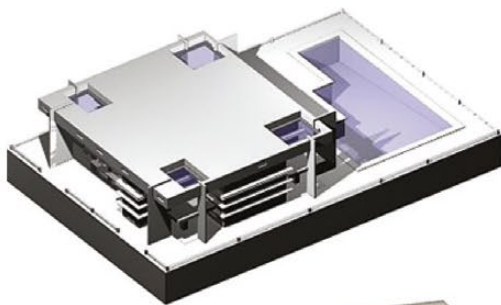

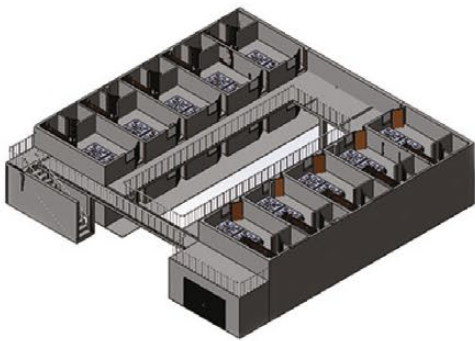

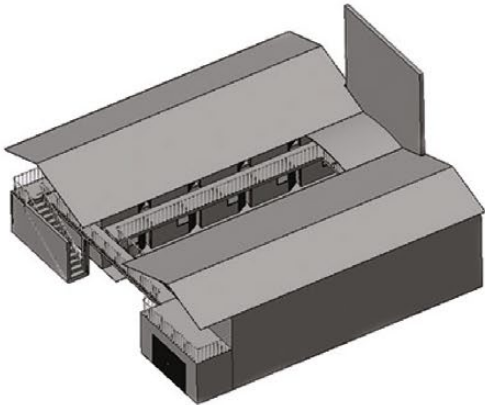

Especially for young nations the simple issues of running water, stable electricity networks across all of its territory, an own currency with acceptable inflation and a stable, sufficient supply of food and goods can be critical in the struggle for **RECOGNITION BY THE UN** or potential partnerships with strategically important nations.

Only with recognition or quasi-recognition of a nations **SOVEREIGNTY** by the UN and/or major global players the own borders can be secured sufficiently, a **DOMESTIC ARMED FORCE & DEFENSE INDUSTRY** set up **LEGALLY** / without the risk of sanctions and foreign interference and the participation in **GLOBAL TRADE** and decision making possible.

No matter how hard it seems, the goals are always achievable: Somme of today's major economies such as Israel, South Korea and even the United States of America once basically started as clandestine missions run by oppressed minorities.

We are glad to help guiding vulnerable ethnic groups around the world into a safe haven and a **BRIGHTER FUTURE** for the generations to come.

VIII. MODERNIZATION OF INFRASTRUCTURE & ECONOMY

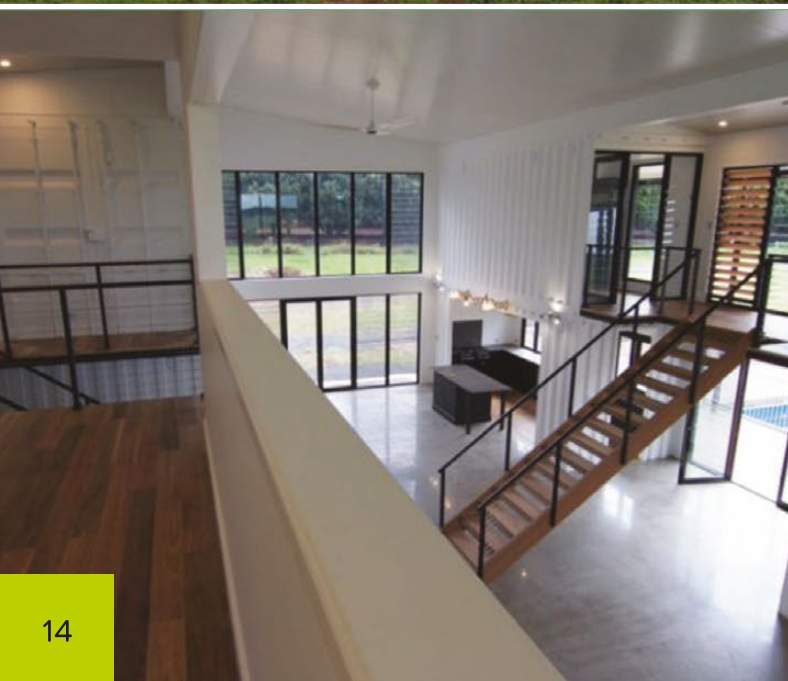

Development & realization of apartment buildings for factory worker families from a neighbouring dilapidated village, Republic of Kosovo (hereinafter)

One of the most challenging tasks in **A SOCIETIES REHABILITATION** is the distribution of the often already very limited **BUDGET**. Especially during war times the majority of tax money and credits goes into defense while the population is certain to switch to foreign currency like Euro or Dollar for their everyday needs and/or savings to **ESCAPE THE UNPREDICTABLE INFLATION** unstable times bare. If an outer economic aggression has over the years shown to very little affect a society in its core, inflation and the resulting capital flight can truly ruin it. The most important part of a societies rehabilitation process is to **FIRST IMPEMENT STABILITY** certainty and predictability. People are more likely to **SUPPORT THEIR LEADERS**, participate, contribute and **STAY LOYAL** out of sympathy, **PATRIOTISM & PERSONAL INTEREST** rather than due law and enforcement.

The symbiosis between a people and its government has to be a **GIVE & GET**. With budget in mind, following the old wisdom not to invest in things that rust, rot and depreciate, in the past we developed and applied city concepts that get **THE MOST OUT OF THE LEAST**. Newly build modern, clean infrastructure with efficient energy supply and waste management, giving the people a place to live, share, work, produce and trade has under our guidance **BOOSTED** small, badly damaged economies into serious local players. It has shown to be critical for money inflow trough increased **TOURISM, INVESTMENT & BUSINESS MIGRATION**.

Modernized autonomous territories with truly satisfied populations are indefinitely more likely to achieve international **RECOGNITION AS A LEGITIMATE STATE** and attract support and useful partnerships. All of these are factors inevitable for the implementation of a **LEGITIMATE & CAPABLE DEFENSE INDUSTRY**, turning hot wars into cold wars, before finally ending conflicts trough bare deterrence rather than actual combat. Looking back at a history having successfully helped government customers to rebuild their infrastructure, economy and security, we are glad to keep offering our services to young nations and oppressed minorities.

IX. MODERNIZATION OF THE LEGAL SYSTEM

“One of the key factors in the success of the Western World was the adoption of limited government and free enterprise.”

The justice system plays an essential role in guaranteeing social cohesion, ensures that the legal system is implemented and performs an important monitoring role in the context of the security sector. Shortcomings in the justice system therefore lead to different structural problems such as legal uncertainty, greater difficulties in resolving conflicts within society and an accumulation of power in the executive authority. This challenges human security and impedes economic development particularly in emerging and developing countries.

HOW WE CAN HELP:

Beforehand

- Assessment and analysis of the status quo of the justice system and penal system in the context of the institutional environment and in relation to the other powers.
Identification of problem areas and the need for reform.
Identification of entry points for reforms.
- Drafting, development and design of suggested reforms and multisectoral strategies for improving the justice system and the penal system, both in the operational area and in the area of principles for legislation.

Implementation

- Development of programmes and materials for capacity building workshops, seminars and training programmes. In particular on issues such as the civil control of the security forces, protection of human rights, gender, corruption or organised crime. Implementation by an experienced trainer.
- Induction and supervision of institutional reform processes in the areas which are relevant to the justice system (ministries, public prosecutor's department, courts, civil society etc.). Particular focus on improving the overall role of the justice system, rule of law, access to justice (in particular for marginalised groups), and the supervisory function.
- Induction and supervision of transitional justice programmes in post-conflict states.

Research and evaluation

- Conducting qualitative and quantitative scientific studies on the individual aspects of the area of justice sector reform and the penal system.
- Evaluation of external projects in the area of justice sector reform and the penal system.

We are more than happy to work with our clients to come up with specific consulting solutions.

[illegible]

X. MODERNIZATION OF LAW ENFORCEMENT

Police forces are the part of the security sector which is most visible to civil society. The general population is especially reliant on having a fully functioning police system which is neutral and accountable for daily life to run smoothly. In emerging and developing countries in particular, the police forces are frequently unable to adequately fulfil this role. Particular problem areas are the politicisation of the police, the unclear relationship between the army and the police, corruption, human rights violations as well as a lack of training and equipment.

WHAT WE OFFER IN THE AREA OF POLICE REFORM:

Beforehand

- Assessment and analysis of the status quo of the police in a civil society and local context and the context of the institutional and legal environment. Identification of problem areas and the need for reform; identification of entry points for reforms.
- Drafting, development and design of suggested reforms and multisectoral strategies for improving the police »

- » system (depoliticisation, accountability, professionalisation, modernisation, definition of the division of roles between the police, military and civil society).

Implementation

- Development of programmes and materials for seminars and training programmes. Operation of the entire range of smaller programmes on individual issues such as human rights, corruption or fighting organised crime, right through to complex training programmes for the police and civil society. Implementation by an experienced trainer.
- Induction and supervision of institutional reform processes in the areas which are relevant to the police system (ministries, parliamentary supervisory bodies, justice, criminal prosecution and penal system, civil society and media etc.).

Research and evaluation

- Conducting qualitative and quantitative scientific studies on the individual aspects of the area of police reform.
- Evaluation of external projects in the area of police reform.

XI. BORDER MANAGEMENT

Ineffective border management systems frequently lead to considerable national, regional and international problems. Terrorism, piracy, organised crime and smuggling all benefit from weak border management. At the same time, this often makes the legal cross-border transit of people and goods more difficult, which may for example reduce the amount of money obtained in customs duties. With these problems in mind, this is a vital area where governance reforms can have a real impact.

WHAT WE OFFER IN THE AREA OF BORDER MANAGEMENT:

Beforehand

- Assessment and analysis of the status quo of the border management locally on the ground. Identification of problem areas and the need for reform. Identification of entry points for reforms.
- Drafting, development and design of suggested reforms and multisectoral strategies for improving the border management (e.g. development of a national border management strategy).

Implementation

- Development of programmes and materials for capacity building workshops, seminars and training programmes (for instance on issues such as corruption or the smuggling of goods and people). Implementation by an experienced trainer.
- Induction and supervision of institutional reform processes in the areas which are relevant to border management (ministries, customs, police/border protection etc.).

Research and evaluation

- Conducting qualitative and quantitative scientific studies on the individual aspects of the area of border management.
- Evaluation of external projects in the area of border management.

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

XII. DEFENSE

In an ever evolving world of **NEW CHALLENGES** one of the most important factors for a society is to not stay behind **PROGRESS** on the international parquet.

The western alliance quickly understood this simple truth right after World War 2. This is why NATO forces **SHARE NEW TECHNOLOGY, TACTICS AND KNOWELEDGE** among each other almost unlimited and unconditionally.

Countries like Russia, India and China are now forging their own alliances with mutual training maneuvers and mutual developments. There is a lightning fast race going on between the big global players leaving behind smaller countries which may not necessary have the budget to participate on a large scale or are just not invited.

We take on this issue passing the latest NATO tactics, strategies and tech on to countries and recognized groups in need for modernizing their defense force and **IMPROVING THE SECURITY OF THEIR HOMELAND.**

REFORM OF ARMED FORCES:

The military plays a key role in the security sector. It protects the sovereignty of the state externally and in many states it also plays a crucial role in internal security. In addition, it steps in when there are national humanitarian emergencies. As the military is the strongest individual player in the security sector, any dysfunction in this area presents a particularly serious problem for the security sector and the state as a whole.

In this case, the result is often uncertainty, human rights violations or, in extreme cases, coups organised by or with assistance from the military. It is important here to establish modern management of the armed forces with the following components:

Clear separation of policing and military responsibilities, civil oversight and supreme civil command as well as adaptation of the budget and size of the armed forces to reflect their requirements.

WHAT WE OFFER IN THE AREA OF THE ARMED FORCES IN TRANSITION:

Beforehand

- Assessment and analysis of the status quo of the armed forces in the context of the institutional and legal environment. Identification of problem areas and the need for reform. Identification of entry points for reforms.
- Drafting, development and design of suggested reforms and multisectoral strategies for improving the management of the armed forces and the institutional framework conditions.

Implementation

- Development of programmes and materials for capacity building workshops, seminars and training programmes. Operation of the entire range of smaller programmes on individual issues such as human rights right through to complex training programmes. Implementation by an experienced trainer.
- Induction and supervision of institutional reform processes in the areas which are relevant to the military system (ministries, (sections of) the armed forces, supervisory bodies, bordering areas of the security sector, civil society).
- Induction and supervision of disarmament, demobilisation and reintegration (GDR) programmes in post-conflict states.

Research and evaluation

- Conducting qualitative and quantitative scientific studies on the individual aspects of the area of military reform and training of the armed forces.
- Evaluation of external projects in the area of military reform and training of the armed forces.

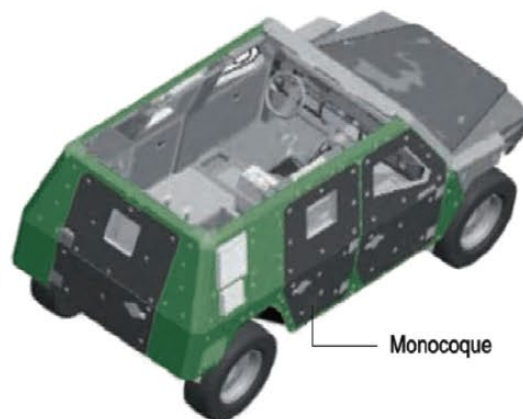

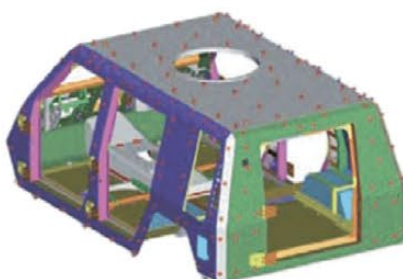

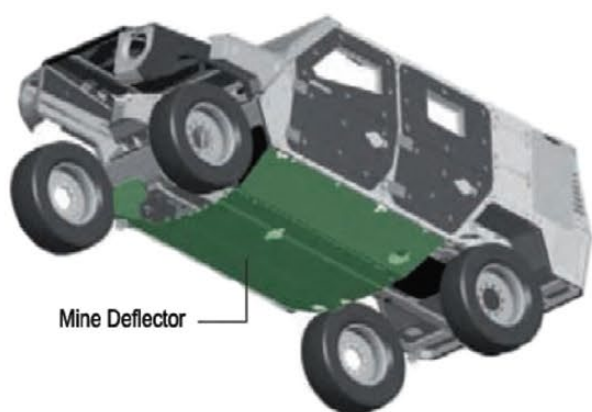

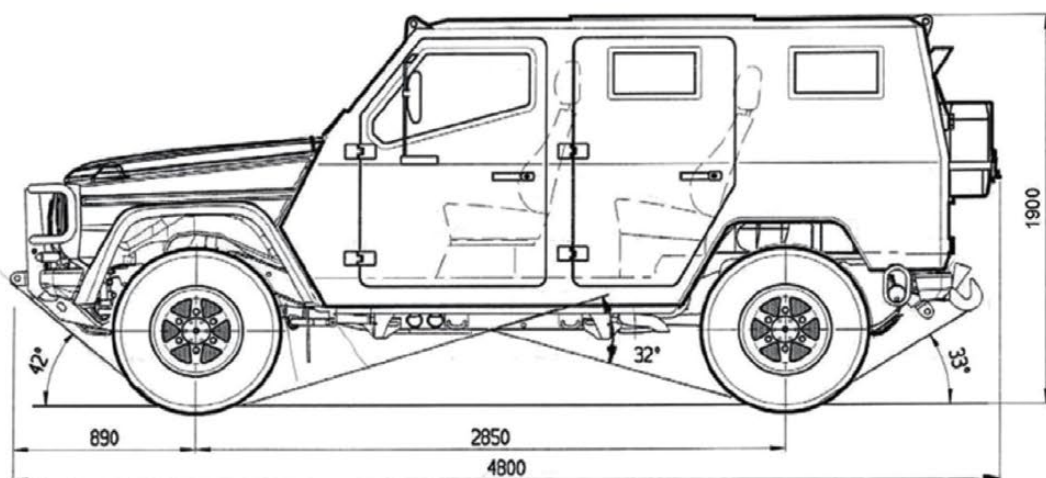

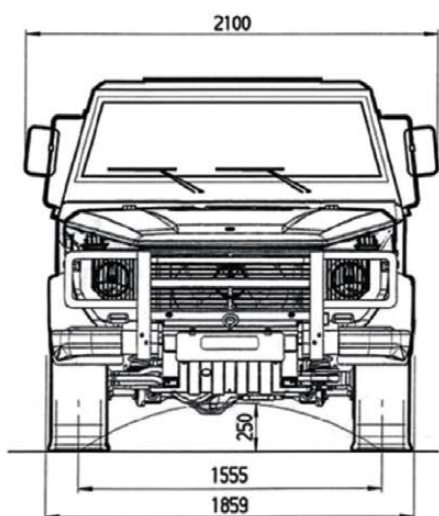

XIII. DEFENSE INDUSTRY REFORM

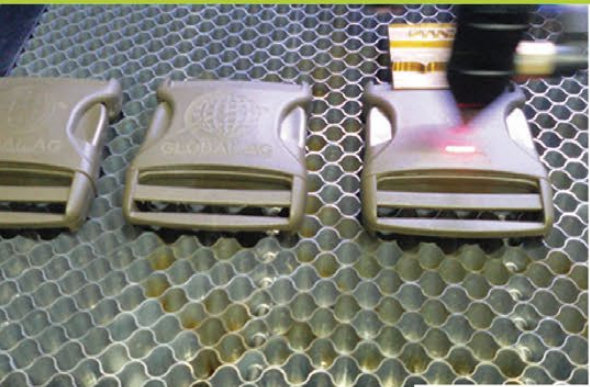

One of the most important components of a nations security apparatus, besides recruiting and education, is the **SUPPLY WITH MODERN & RELIABLE DEFENSE TECHNOLOGY**. While import of foreign tech is a good short term solution, nothing beats domestic mass production in terms of logistics and cost-efficiency ratio on the long run. Even we, as a private enterprise, still produce the majority of our Armored Personal Carriers, body armor and radio communication devices ourselves. While the step to a domestic defense industry seems expensive and far, it often is overestimated and more **EASILY ACHIAVABLE** when choosing the right approach. With the years and missions going by we developed and introduced concepts and techniques, yet again pushing the most out of the least, ready to pass on our knowledge and experience in this field on to clients and partners.

Please place a personal request for more info on this specific topic.

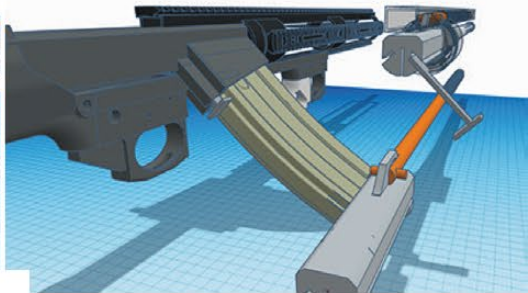

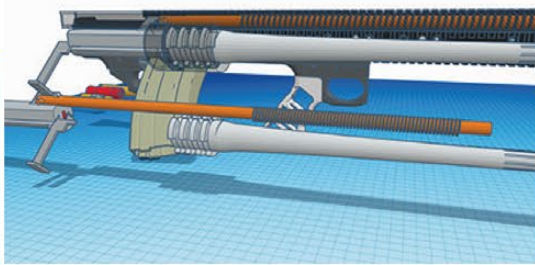

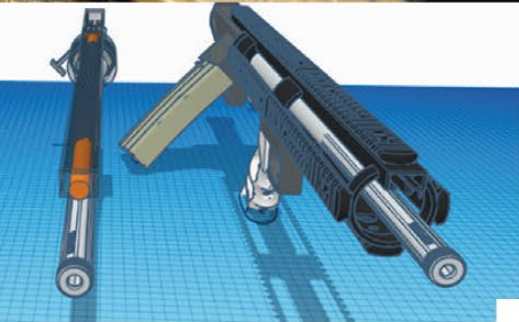

Full development cycle from planning trough realization to testing and presentation of our GLOBAL.AG C.A.T. 4x4
